

Maximize instrument performance after relocation

MGI Relocation Service

Are you still worrying about laboratory relocation? Cooperate with MGI's experts can minimize the impact of relocation on your research work, allowing you to recover related research work as soon as possible.

-  Minimize downtime
-  Ensure instrument performance after relocation
-  Maximize operational efficiency

Packing and Boxing

Before moving the machine, we will fully communicate with you to ensure correct site preparation, then pack the instruments in the laboratory and keep you updated on the delivery process.

Transportation and Insurance

You are free to choose the logistics company for transportation.

Installation and Performance Verification

After relocation, we will unpack the box on-site in the laboratory and perform a series of steps according to the instrument checklist. If there are any missing items, we will address it immediately.

After the hardware and software are installed and set up, we will run the MGI checkout standard to test whether the instrument is operating according to the manufacturing specifications. The performance verification process includes but is not limited to verification testing of optical systems, fluid systems, temperature control systems, etc.

*MGI relocation service doesn't cover logistics and transportation.

*MGI relocation service fee does not cover the costs incurred in the packing box and transportation process. The relocation service fee only covers labor, travel and reagent costs incurred during the performance verification process.

*Before the performance verification, you need to sign the "User Installation Condition Confirmation Form" to confirm the installation conditions.
