

MGI Low Throughput Automated Solution

Single Cell Chromosome Copy Number Variation Test

Introduction

The MGICare Detection Kit for Single Cell Chromosome Copy Number Variation Test is a kit for detecting single-cell chromosome copy number variation tailored to MGI sequencing platform. The kit can be used to manipulate human single-cell or micro-cells (such as in vitro fertilization-embryo transplanted human embryonic cells, human peripheral blood lymphocytes, etc.) to prepare single-stranded circular DNA compatible with MGI sequencing platform.

Comprehensive functions

Integrated design comprising functional modules including PCR preset protocols, temperature control, etc. covering the whole testing process.

Cost effectivity

Short time to set up the library, batched sample processing, suitable for small to medium laboratories.

Professional and minimal contamination

Including a laminar flow hood which eliminates external contaminants to maximize accurate results.

Flexible platform

Allows customized workflow development; high expandability.

Automated Sample Preparation System

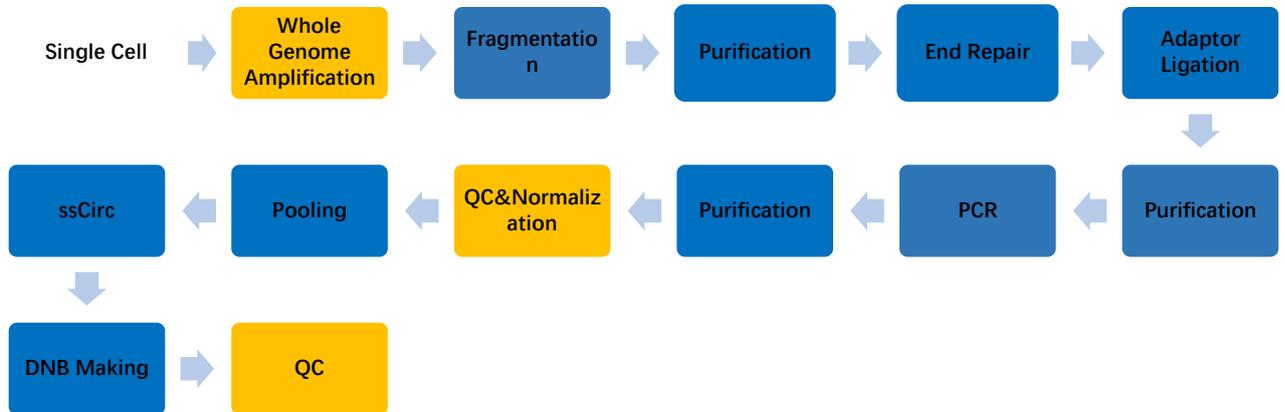

—Designed for Next Generation Sequencing Applications

MGISP-100 is an automated system focused on the field of sample preparation for the next generation sequencing. The automatic process can be edited for different needs. MGISP-100 can save a great deal of effort, improve the stability of the preparation of NGS library, reduce the cost. Currently, it has been operated stably for MGI sequencer's library preparation.

The Throughput for [MGICare Detection Kit for Single Cell Chromosome Copy Number Variation Test] based on MGISP-100 can be set 16 rxn/run. MGISP-100 can do Fragmentation, End Repair, Adaptor Ligation, PCR Amplification, Purification, Pooling, DNB making and more.

Automated Solution

MGISP-100 Data Performance

Stable and Effective Library Results and Sequencing Results from manual made standard samples.

Accurate test results

Testing different manual-made samples and clinical samples, the detection results of the MGISP-100 are consistent with the standard karyotype.

	Condition	Result
Sample 1	standard karyotype	47,XX,+21
	MGISP-100	47,XX,+21(1.42)
Sample 2	standard karyotype	47,XY,+X
	MGISP-100	47,XY,+X(2.16)
Sample 3	standard karyotype	46,XY, dup(11p15.5-p14.3,21.827M),del(11p14.3-p13,11.501M)
	MGISP-100	46,XY, dup(11p15.5-p14.3,22.00M,1.278);del(11p14.3-p13,11.33M,0.829);
